THE CREATOR'S CALENDAR

TIME, RHYTHM & ALIGNMENT - A RESTORATION SERIES

PART 6 - TESTING THE PATTERN

(CKO Restoration Series)

Up to this point, we have explored:

- Time established in the heavens
- The nature of a true sign
- The importance of visibility and shared recognition
- The development of different timekeeping systems

Now we arrive at a turning point:

Can this be tested?

Because if something is true...

It should be observable

This is where the discussion shifts:

From explanation

To experience

1. THE INVITATION TO OBSERVE

Genesis 1:14 does not describe time as something hidden.

It points to the heavens:

As a visible system

This means:

Understanding does not begin with agreement

It begins with observation

You do not need:

- special tools
- complex calculations
- expert knowledge

You need to look

2. STARTING WITH THE MOON

The simplest place to begin is:

The moon

Over the course of a month, observe:

- how it appears
- how it changes in light
- where it rises
- how long it remains visible

What becomes noticeable is:

A repeating pattern

This pattern is not random.

It is ordered

3. RECOGNISING THE FULL PHASE

Among all phases, one stands out clearly:

The fully illuminated moon

It is:

✓ unmistakable
✓ bright
✓ visible across multiple nights

This creates a natural reference point:

Something you can recognise without uncertainty

This is why it becomes central in the discussion.

Not because it is assumed...

But because it is observed

4. WATCHING THE CYCLE

As you observe across a full cycle, ask:

What repeats?

What is consistent?

What can be recognised without confusion?

You may begin to notice:

- a pattern of increasing light
- a point of fullness
- a return toward darkness

This cycle continues consistently.

Month after month

5. CONNECTING OBSERVATION WITH SCRIPTURE

Now bring observation alongside Scripture:

- Genesis 1:14 (signs in the heavens)
- Ezekiel 46:3 (New Moon and worship)
- Isaiah 66:23 (ongoing worship cycle)

The question becomes:

Do the patterns in the sky match the function described in Scripture?

Not:

What have I been told?

But:

What do I see?

6. TESTING WITHOUT PRESSURE

This step is important.

You do not need to decide immediately

You are not asked to:

- change everything
- reject what you know
- make sudden conclusions

Instead:

- You are invited to observe consistently

Because clarity comes through:

✓ repetition
✓ pattern recognition
✓ quiet confirmation

7. A PRACTICAL WAY TO BEGIN

A simple approach:

Step 1:

- Identify the full moon

Step 2:

- Watch it over 2–3 nights

Step 3:

- Continue observing each night

Step 4:

- Notice how the light changes

Step 5:

- Track the pattern across the month

You may choose to:

- write it down
- take photos
- compare month to month

- Over time, the pattern becomes familiar

8. WHY THIS METHOD MATTERS

This approach restores something important:

Direct engagement with creation

Instead of relying only on:

- inherited systems
- fixed dates
- external authorities

You begin to:

Witness the pattern yourself

This is not rejection.

It is reconnection.

9. WHAT PEOPLE OFTEN NOTICE

When people begin observing:

They often report:

- greater awareness of rhythm
- clearer understanding of cycles
- deeper connection to time

And a simple realisation begins to form:

Time is not abstract

It is visible

10. THE QUESTION THAT FOLLOWS

After observation, a natural question emerges:

If this pattern is consistent...

And if Scripture points to the heavens...

Should this pattern be considered more carefully? This is not a forced conclusion.

It is a question that arises naturally

CONCLUSION

This part does not attempt to prove.

It invites you to see

If the Heavenly Father placed time in the heavens...

Then it must be observable

And if it is observable...

Then it can be tested

Restoration does not begin with argument.

It begins with awareness

COMMON QUESTIONS

Q1: Do I need to understand everything first?

No. Observation comes first.

Q2: What if I see something different?

Continue observing. Patterns reveal over time.

Q3: How long should I observe?

At least one full cycle — preferably several.

Q4: What am I looking for?

Consistency, visibility, and pattern. Look also in nature for other Full moon alignments.

Q5: Do I need special knowledge?

No. The system is visible to all.

Q6: Why start with the moon?

Because it is the most visible cycle marker.

Q7: What if this challenges what I've known?

Take your time. Understanding grows gradually.
